part of NuvinkaDx

Sexually Transmitted Infections (STI) PCR Portfolio

Improve Efficiency in Your Lab with GeneProof's One Workflow system

ONE WORKFLOW. SIMPLIFY COMPLEXITY.

Features and Benefits

ONE WORKFLOW

GeneProof assays feature a universal PCR profile, meaning multiple therapeutic assays can be run on a single plate in a single PCR run by leveraging the GeneProof Universal Internal Control (UNIC). This eliminates the need for running multiple PCR cyclers at the same time. Together with the extraction croBEE system, a streamlined solution for nucleic acid extraction, our GeneProof One Workflow system can simplify your laboratory routine.

FLEXIBILITY

GeneProof offers multiplex kits, like CT/NG/MG, and GPacks, like the Urethritis Plus GPack, as well as a broad menu of singleplex kits within the STI portfolio. That way labs can always choose the best strategy for their required parameters allowing for flexibility in ordering and parameter choice.

READY-TO-USE MASTER MIX

The reagent master mix is ready to use for all kits, requiring no reconstitution or adjustment, minimizing the manual steps involved in PCR setup and simplifying the workflow. No more complicated mixing — just open and use!

REGULATORY STATUS

Many of GeneProof's kits, including GeneProof Chlamydia trachomatis PCR Kit and GeneProof CT/NG/MG Multiplex PCR Kit, are already compliant with the European Parliament and Council Regulation (EU) 2017/746 (IVDR).

“What stands out most about GeneProof's kits is their impeccable accuracy and user-friendliness... In our line of work, precision is paramount, and GeneProof consistently delivers on this front.”
